Art Unit 1653

Restriction to one of the following inventions is required under  
35 U.S.C. 121:

I. Claims 1-34 are drawn to a method for repairing a defect locus in  
a nonarticular cartilage tissue of a mammal comprising differing  
osteogenic proteins such as OP-1, OP-2, OP-3 etc. and drawn to  
the sequences set forth in SEQ ID NOS: 3-7, from which an election  
of one sequence is required, classified in class 514, subclass 2.

II. Claims 35-46 are drawn to an implantable device comprising  
differing osteogenic proteins set forth in SEQ ID NOS: 3-7, from  
which an election of one sequence is required, classified in  
class 435, subclass 283.1.

III. Claims 47-50 are drawn to a method of promoting chondrogenesis,  
classified in class 514, subclass 21.

IV. Claims 51-56 are drawn to a method of repairing a defect locus in  
a ligament in a mammal, classified in class 514, subclass 2.

The inventions are distinct, each from the other because of the  
following reasons:

Groups I and II encompass several patentably distinct inventions as the  
claims consists of different osteogenic proteins, having different structure,  
thus different properties and function (see the sequence listing).

The inventions Groups I-IV are patentably distinct as the methods of  
Groups I, III and IV do not mention the use of the device of Group II, thus,  
can be used separately.

The methods of Groups I, III and IV are patentably distinct because the

Serial Number 09/828,607  
Art Unit 1653

methods have different method steps and end points. For example, the method of Group I is to affect cartilage whereas the method of Group IV is to affect ligament.

5           Furthermore, the inventions have acquired a separate status in the art as a separate subject for inventive effect and require independent searches. The search for each of the above inventions is not co-extensive particularly with regard to the literature search. A reference which would anticipate the invention of one group would not necessarily anticipate or make obvious the  
10           other group. Moreover, as to the question of burden of search, classification of subject matter is merely one indication of the burdensome nature of the search involved. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject  
15           matter, election of a single group for examination purposes as indicated is proper.

          A telephone call was made to Mr. James Haley on February 7, 2003 to request an oral election to the above requirement, but did not result in an  
20           election being made.

          Applicant is advised that the response to this election requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

25           Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of

Serial Number 09/828,607  
Art Unit 1653

inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
